

Cooper B-Line Arista solar PV flat roof mounting system

Monday, 19 July 2010

Cooper B-Line unveiled its Arista mounting system for solar photovoltaic (PV) commercial rooftop applications. The company says that, unlike other PV mounting systems, the field-adjustable Arista™s pre-assembled fittings and clamps make installation easy, resulting in a reduced cost-per-watt that lowers total installation costs. The system can be used to support virtually any solar PV panel type or size, boasts Cooper, and can be landscape or portrait mounted. Ballasted and positively tied options provide added flexibility, while the system™s hinged design allows for rooftop maintenance without disconnecting panels.
